EP Series
Differential Pressure/Air Velocity Transducer

Product Description
The EP transducer can measure either air pressure or velocity with the flip of a switch The EP is available in three installation configurations: duct, panel or universal. Duc and panel models have two pressure and velocity options: $0-1^{\prime \prime}$ WC / $0-3,000 \mathrm{ft} / \mathrm{min}$ or 1-10" WC / 3,000-6,000 ft/min with four field-selectable sub-ranges. The universal model comes in one pressure/velocity range: $0-10$ " WC / 0-7,000 ft/min with seven fieldselectable sub-ranges for pressure and eight for velocity. All variants are available with and without display. The EP has an IP65/NEMA 4 environmental rating and a 5-year limited warranty.

Safety Precautions

this product is used in a manner not specified by
the manufacturer the protection provided by the
product may be impaired. No responsibility is as-
sumed for the manufacturer for any consequences
arising out of the use of this material.

## Installation Instructions

schneider-electric.com | 4
Installation, Wiring \& Configuration

1. Plan the installation. Panel or duct mount?

Note: For velocity applications, use the Veris VFXP Series air velocity/measurement probe or Veris AA18, AA19 or AA20 velocity pitot tubes. For use with the EPP (panel) and EPU (universal) models in Velocity mode only. Sold separately.

Velocity with VFXP Probe
2. For duct mount applications, thread the probe into the back of the device housing as shown in the dimensional drawing.
3. Configure the internal tubing for the selected installation method as described below.

Duct mount tubing configuration:
a. Connect the right-side tube to the rear brass barb marked as "-" on the underside of the device housing.
b. Connect the left-side tube to the probe in the back of the device housing.

Panel mount tubing configuration:
a. Connect the right-side tube to the rear brass barb marked as "-" on
the underside of the device housing.
b. Connect the left-side tube to the fron brass barb marked as on the underside of the device housing

Installation, Wiring \& Configuration (cont.)
4. Mount the transducer (see the screw hole diagram below).
in. (mm)

5. For applications using conduit, remove the cable gland nut on the bottom of the unit. hread a standard 1/2-inch NPT female threaded coupler onto the body of the cable gland. Connect the opposite end of the coupler to the conduit.

6. Set DIP switches to desired settings.

DIP Switch 1: Scale ON = Pascal ( $\mathrm{m} / \mathrm{s}$ ) OFF = In. WC (ft/min)
DIP Switch 2: Mode
ON = Velocity OFF = Pressure
DIP Switch 3: Direction*
ON = Unidirectional OFF = Bidirectional

DIP Switch 4: Response ON = Slow OFF = Fast
DIP Switch 5: Output $\mathrm{ON}=4-20 \mathrm{~mA}$ OFF = Voltage
DIP Switch 6. Volt Scale $\mathrm{ON}=0-5 \mathrm{Vdc}$ OFF $=0-10 \mathrm{Vdc}$
DIP Switch 7: Unused
DIP Switch 8: Unused
*Velocity mode is unidirectional regardless of DIP switch setting.

## Installation Instructions

Operation
EP Series devices employ high performance sensors and sophisticated temperature compensation circuitry. The sensor achieves its bes accuracy after an initial warm-up period. During the first few minutes of operation, readings at zero pressure and the lowest pressure ranges appear erroneous. Following this initial warm-up period, the EP device maintains its specified accuracy and stability.
LCD Display: The display momentarily indicates range 'SET' when a selection is made. Pressure is normally indicated on the display. Units are in inches water column (in. WC), Pascals ( Pa ) or kilopascals ( kPa ) as indicated on the display. The display shows 'OVER' when the pressure is over range.

3-wire, 0-5 V/0-10 V Voltage Output

9. Wait five seconds, then press and hold the ZERO pushbutton for two seconds or provide contact closure on the AUX ZERO terminal. This will reset the output and display to zero pressure. For best accuracy, press the ZERO buto while both ports a ope unit he unit from accidental zero, this feature is nabled only when in (25 Pa) of factor is win 0.1 in . WC (25 Pa) of facto calibration
10. Connect desired external tubing to the EP.
